

Furniture and Floor Stands

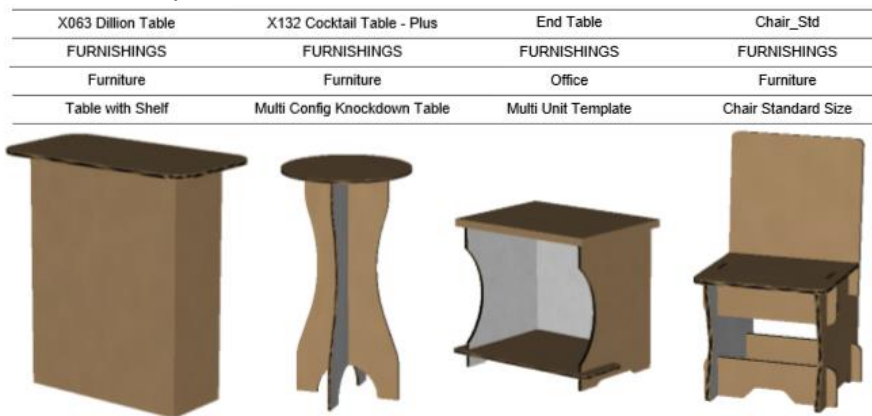

SAi Box&Display can be used to create virtually any type of package or POS display, including furniture.

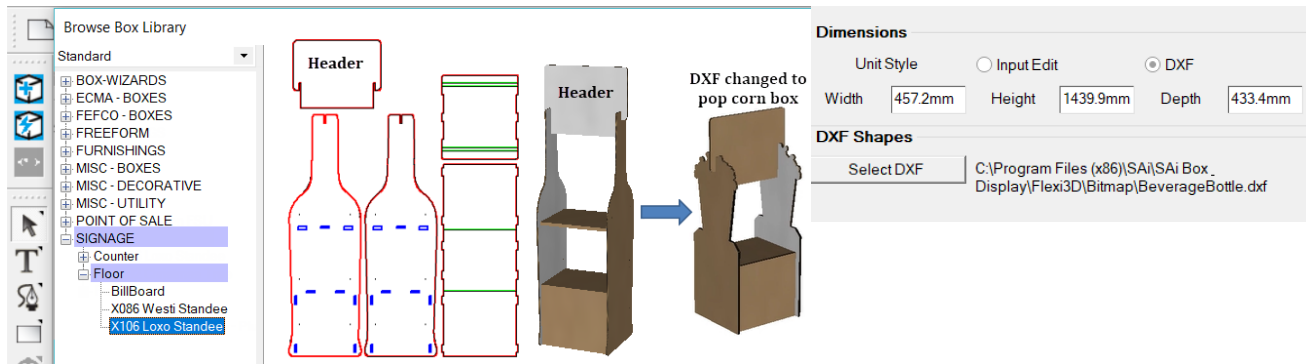

Box Wizard can be used to create your own templates and is the perfect tool for quickly designing one off and small runs of boxes and shipping cartons. It is fast and easy to use with a very intuitive interface.

Furnishings has a selection of **Furniture** chairs, stools and shelf unit as well as **Office** items as listed, left.

Examples of **Furniture** are the **X063 Dillion Table** template, the **X132 Cocktail Table**, end tables and chair stands.

Floor Stands are also available such as the **SIGNAGE/Floor/X101 Giraffa FSU** template which looks like a bottle and is based on a dxf – for more details on **Input Edit** and **DXF** refer to [Tutorial 201](#) and [Tutorial 204](#). The video shows how you can change the basic elements of the box, such as the DXF, to be creative and suit your specific requirements.

The **X106 Loxo Standee** template has holes in the legs that can be drilled to insert rods. The **Hole Settings**, however, relate to the ability to add a hole in the board e.g. shown far right.
